

## Brazing in vertical position in CAB Batch-Type Furnace

Since 2000 sellacan sold 40 Batch-Type-Furnaces world-wide, mostly used for producing **heat exchangers brazed in vertical position.**

Based on the experience we are sharing with the users of our Batch-Type Brazing Furnaces we were sure that the

### Plates & Bars Oil Cooler

shown on the right side will be brazed perfectly as one of the first products during Start-up of the CAB Batch-Type furnace in

### Dolphin Manufacturing L.L.C. in United Arab Emirates

a few weeks ago. As expected it was another successful Start up. Now Dolphin also benefits from the possibilities of Batch-Type Furnace:

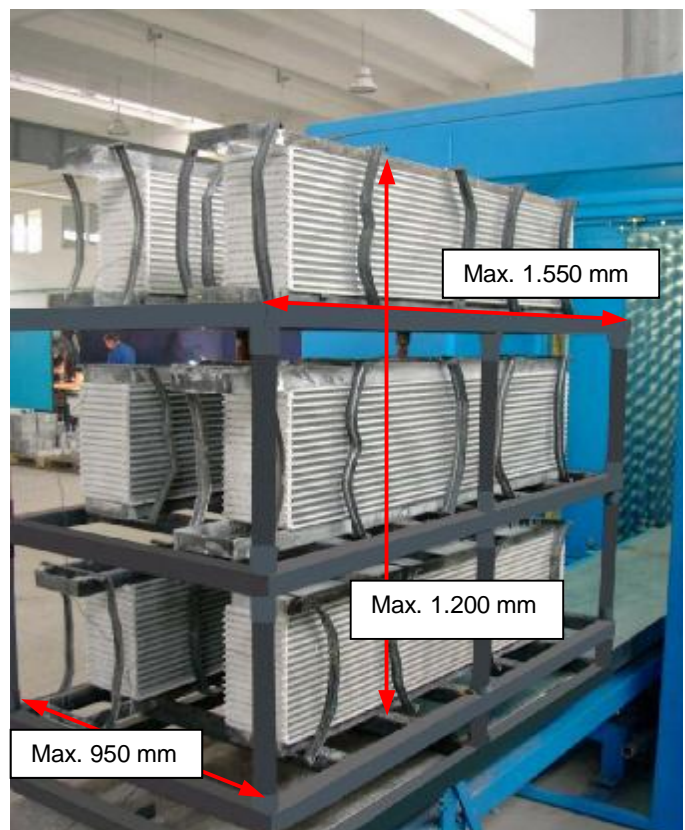

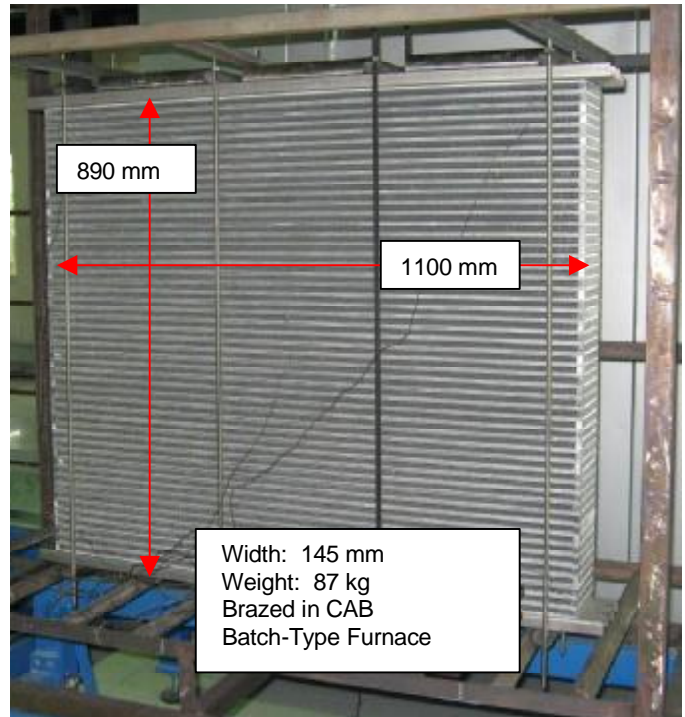

- Variable use of different types of heat exchangers (size, weight, type)
- Vertical brazing (CAC, Oil Cooler) as well as horizontal brazing in the same furnace
- Easy change between different types

## Maximum loading space as indicated on right side

for loading the heat exchangers in horizontal or vertical position as most preferable for best brazing quality.

- Batch size with dimensions (h x w x l) 1,400 x 1,000 x 1,600 mm is offered.
- Loading capacity up to 450 kg gross.
- Brazing of heat exchangers in vertical and / or horizontal position in the same batch.
- Energy consumption as lowest as possible. by using as most as possible the available loading space

By the different layouts of our batch type brazing equipments we can also offer semi-continuous brazing in Batch-Type process.
